

Protecting Corporate Documents Shared Daily Through Microsoft SharePoint

Businesses around the globe rely on Microsoft SharePoint portals to offer their employees easy access to corporate documents and to help them collaborate more efficiently. As a central and business-critical tool for enterprises worldwide, SharePoint requires reliable, dedicated data protection to ensure that the documents it manages can be recovered in case of disaster. Atempo Time Navigator for Microsoft SharePoint, a dedicated module of Atempo's enterprise-class data protection solution, is designed with SharePoint's unique features in mind and offers dedicated protection of full SharePoint systems and all the objects they store.

Reliable Protection of Microsoft SharePoint Systems

Whether you have deployed a single Microsoft SharePoint server or a SharePoint server farm, Atempo Time Navigator for Microsoft SharePoint is the solution to protect the valuable information and documents shared by your users daily. Atempo Time Navigator for Microsoft SharePoint offers simple, centrally managed and efficient backup of this business critical application. Restoration is very simple, whether you are restoring a full server or simply a document or other object.

Full Disaster Recovery Capability for Microsoft SharePoint Servers

While most day-to-day restores will be for documents or objects accidentally deleted by users, full system protection and restoration of a complete server is sometimes necessary. Atempo Time Navigator for Microsoft SharePoint can protect the entire system in case of a disaster or a server crash. In a few mouse clicks, you can bring back your entire system and get your users back to work quickly.

Granular Restore for Faster Access to a Single Document

Atempo Time Navigator for Microsoft SharePoint offers granular access to documents and objects stored in the Microsoft SharePoint system. Using the Atempo Time Navigation restore interface, you can search documents that were backed up at a specific point in time. The intelligent and simple display of the documents and objects makes it very easy to find the elements that have been deleted and allows you to bring them back quickly. With Atempo, when your users delete documents or objects accidentally, you can easily restore them into the system.

Key Features and Benefits

Atempo Time Navigator for Microsoft SharePoint has been designed to adapt to any Microsoft SharePoint environment. Whether you have a single SharePoint server or a large SharePoint server farm, Atempo Time Navigator can be easily deployed and will seamlessly protect your SharePoint environment.

Central Management of Small to Large SharePoint Environments

Through an intuitive administration GUI, Atempo Time Navigator enables the remote and central management of your entire SharePoint environment. Several SharePoint servers can be centrally managed and monitored to ensure the highest level of protection and quick intervention by the administrator if a backup fails.

Intuitive Restoration with Time Navigation Capability

With the Atempo Time Navigation restore interface, the backup administrator can choose a specific time when a backup occurred and browse the backup set to retrieve all SharePoint documents during that time. Deleted files can also be easily identified in the backup set, making it easy to retrieve accidentally deleted files.

File-level Restoration of SharePoint Documents and Objects

With Atempo, you don't need to completely restore the Microsoft SharePoint Server if only one document has been lost. Using the Atempo Time Navigation restore interface, you can browse through the list of objects and documents that have been backed up and only restore the ones you need.

Transparent Protection of SQL Server

Atempo Time Navigator also protects the SQL Server database of the SharePoint systems with full or incremental backups. The backups are transparent—they do not impact database performance so SharePoint users are not affected.

Disaster Recovery of SharePoint Server

While most day-to-day restores will be for documents or objects accidentally deleted by the users, full system protection and restoration of a complete server is sometimes necessary. Atempo Time Navigator for SharePoint has the capability to protect the entire system in case of a disaster or a server crash. In a few mouse clicks, you can bring back your entire system and get your users back to work quickly.

Protection of Document Ownership and Permissions Schema

Atempo Time Navigator for Microsoft SharePoint preserves document ownership and permissions schema. Documents and other SharePoint objects are restored with their original ownership intact.

Supported Configurations

SharePoint Versions:

- ⊙ Microsoft Office SharePoint Server 2007
- ⊙ Microsoft SharePoint Services 3.0

Server Platforms:

- ⊙ Microsoft Windows Server® 2003
- ⊙ Microsoft Windows Server® 2008
