ENTREPRISE DATA PROTECTION FOR VMWARE

PROTECT & RESTORE VIRTUAL MACHINES APPLICATIONS AND DATA

Easy-to-use, scalable data backup & restore solution

Advanced Recovery for your Critical Data

Smart Backup for Virtual Machines

Freedom to Choose where to Store your Data!

- **3-click** restore for any backed-up version of a virtual machine (VM) or files :

  1: Select

  2: Synchronize on date/time

  3: Restore

- Search and find VMs and files wherever they are located even if they have been deleted.

- Express Restart VM from existing backup. Get up and running in no-time, even if the VMs have been deleted.

Wouldn't it be nice to turn back the time? Atempo's Tina lets you do just that.

Atempo knows how important your business continuity really is. Any downtime has major financial impact and our **HyperVision Agent for VMware** with its straightforward interfaces gets business back on track in no time.

Data is continually at risk from virus attacks, malware and human error. Other solutions make the administrator trawl through backup jobs to find the correct data set. Tina thinks like you – just select the virtual machine, directory or even file and then choose the date you want. It really is that simple. Tina keeps track of the data so you don't have to worry.
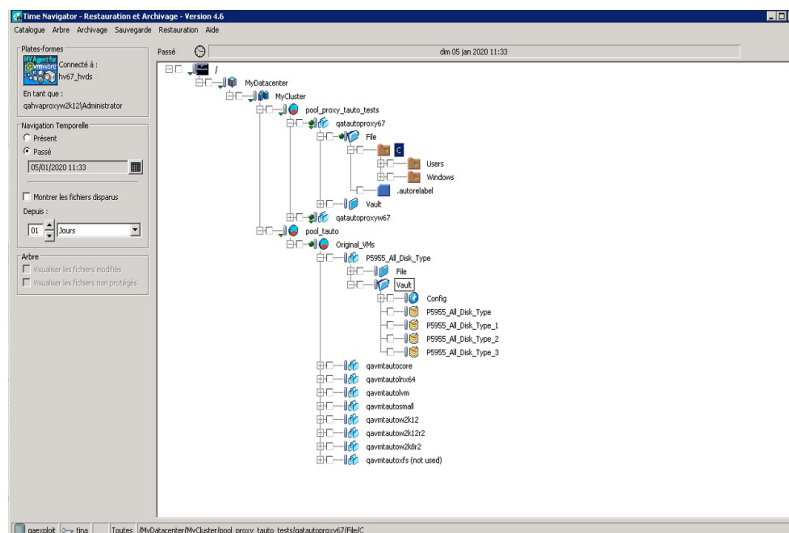

With the possibility to direct backup to either disk storage, deduplication storage or tape there is a solution for everyone and it's all managed through one central Web Interface.

Tina manages the data wherever it resides, and lets you decide how long to keep it. It even manages retention per media type. **HVA for VMware** with its selective indexation means you can easily find VM's or files, even if they have been moved or deleted. It's never been easier to recover a VM, a file or a misplaced directory.

And when using our revolutionary deduplication mechanism, you can even restart your VM from an existing backup, and users won't even notice there was a problem.

- **Single-pass** backup for full VMs, and individual file-level restore for Windows and Linux VMs
- **Flexible** VM indexing for instant data recovery
- Simple restore through Time Navigation – from **any version at any time**
- Supports **multiple** backup destinations: disk, deduplication storage and tape
- **Global** block-level deduplication
- **Replication** for extra security
- **Cross-restore** of VM or file to different locations
- **Filter** using tags
- Displays **deleted** files for instant restore
- **Express Restart** VMs in minutes

Supported Environments

Platforms	Hosts
ESXi 6.x	**vSphere 6.7, 6.x, 5.5**
