

# AUTOMATED DATA PROTECTION FOR EXCHANGE SERVERS

## ADVANCED HOT BACKUP AND RECOVERY SOLUTION FOR EXCHANGE SERVERS AND MAILBOXES

Tina for Exchange offers an easy backup and recovery solution for Exchange 2019, 2016 and 2013.

IT administrators need a fast, reliable and user-friendly way of restoring Exchange data. Tina integrates Exchange backup into its central administration interface to work alongside other backup applications.

Tina doesn't mind if the data is on disk, deduplicated storage, Cloud or tape, the administrator just needs to select the restore date and time.

### High Performance

Tina for Exchange is highly flexible and allows you to choose the fastest backup architecture: either direct-attached or through the network. You can use high-speed disk subsystems, high-speed tape devices or Cloud as the backup target.

### Protect all Exchange Architectures

All configurations, from a single server to advanced cluster, are fully protected by Tina for Exchange including Database Availability Group (DAG). Tina can easily restore a whole Exchange Database to the recovery server.

### Fully Automated Data Protection

Tina for Exchange is easily incorporated into the Web UI allowing the administrator to schedule and monitor operations. Tina enables you to fully automate the data protection of Exchange servers while reducing backup administration management and costs.

### Fast Recovery

A powerful restore feature for administrators and/or Exchange users, empowering them to synchronize database and logs files before restore. Mailbox searches are integrated into the restore interface.

## Key Features and Benefits

Features	Benefits
Tina backup application for Exchange allows 'hot' backup of MS-Exchange databases.	<ul style="list-style-type: none"><li>• No impact on users.</li><li>• E-mail service is available, even during backup operations.</li></ul>
