

AUTOMATED DATA PROTECTION FOR MICROSOFT 365 EMAIL & ONEDRIVE

ADDITIONAL PROTECTION AND RECOVERY SOLUTION FOR EMAILS AND ONEDRIVE DATA

IT administrators need a fast, reliable and user-friendly way of restoring cloud-based Microsoft 365 emails and files. Tina provides protection over and above internal Microsoft tools (long-term retention, missing emails/files detection, ...). Tina includes this module into its central administration interface to work alongside other backup applications. Available backup targets include high-speed disk subsystems, deduplicated storages, high-speed tape devices or Cloud.

Our straightforward restore interface allows administrators to select the mailbox individual email or file for recovery. No matter if the data are on disk, deduplicated storage, tape or cloud, the Tina administrator just needs to select the date and time of the data to restore.

**High
Performance**

Tina for Microsoft 365 allow mailbox and folders backup parallelizations. This optimizes performance and respects defined backup windows. Using a deduplication storage reduces network traffic and further shortens the backup window.

**Security
Compliant**

Optional encryption ensures Microsoft 365 objects are protected at the time of backup. Deploying private and public certificates adds a layer of security to ensure no unauthorized personnel can launch restores operations. Finally, each operation will be audited to ensure the traceability of restore operations.

**Fully Automated
Data Protection**

The Tina for Microsoft 365 module allows the administrator to schedule and monitor operations alongside other backups. For shorter RPOs, the protection of OneDrive folders and emails can be scheduled down to every 5 minutes.

Fast Recovery

Files, folders, or emails that have been deleted are displayed for quick restore. Finding emails or files through the inbuilt search engine allows direct access to a folder or to a mail based on sender, subject, cc, and more. Simply synchronize and restore.

Key Features and Benefits

Protect Microsoft 365 Email and OneDrive

- Take back control and backup according to your company policy (down to every 5 minutes)
- Store backups on disk, deduplicated storage, tape and Cloud

Greater Retention

- One solution addressing all company data protection needs (VMs, servers, applications, SANs, Microsoft 365, ...)
- Take control of your cloud-based critical data by extending its life cycle

Granular restore capability

- Granular restore of mailboxes, folders and individual email
- Search object by name, or for emails criteria such as sender, cc, subject etc. for fast access and rapid restore

Intuitive Restore

- 3-click restore to get emails or files back to the original location or to an alternative one
- View Office 365 objects that have been deleted. These too can be recovered

Security & Compliance

- Encrypt data and meet strict compliance regulations
- Keep data long-term to comply with regulations

Optimized Backup

- Faster backup time by protecting multiple mailboxes or folders in parallel
- Backup wizard to select multiple mailboxes for fast configuration
