

DATA PROTECTION

AUTOMATED DATA PROTECTION FOR EXCHANGE SERVERS

Advanced Backup and Recovery Solution for EXCHANGE Mail Servers

Tina natively includes the ability to backup your Exchange On-prem servers.

Exchange backups and restores are controlled from Tina's centralized administration interface. The protection of email is performed in parallel with the protection of other applications, storage and servers in the enterprise.

With Tina, the task of restoring deleted or missing emails is simplified. Time-based navigation makes it possible to quickly visualize the changes made.

Storage Flexibility

Tina allows you to apply automatic and flexible email backup policies by choosing several types of storage. Disk, tape or cloud, your emails are backed up in a deduplicated way.

Protection of all Architectures Exchange

All configurations, from single server to sophisticated cluster, are fully protected by Tina for Exchange, including the Database Availability Group (DAG). Tina can easily restore an entire Exchange database to the recovery server.

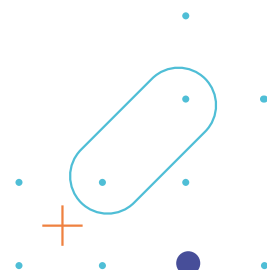

Data Protection Automation

Tina for Exchange integrates easily with the web user interface and allows the administrator to schedule and control operations. Tina allows you to fully automate Exchange server data protection while reducing management requirements and administration costs.

Fast Data Restoration

A powerful restore feature that allows Exchange administrators and users to synchronize the database and log files before the restore. Granular recovery is available through a search built into the recovery interface.
